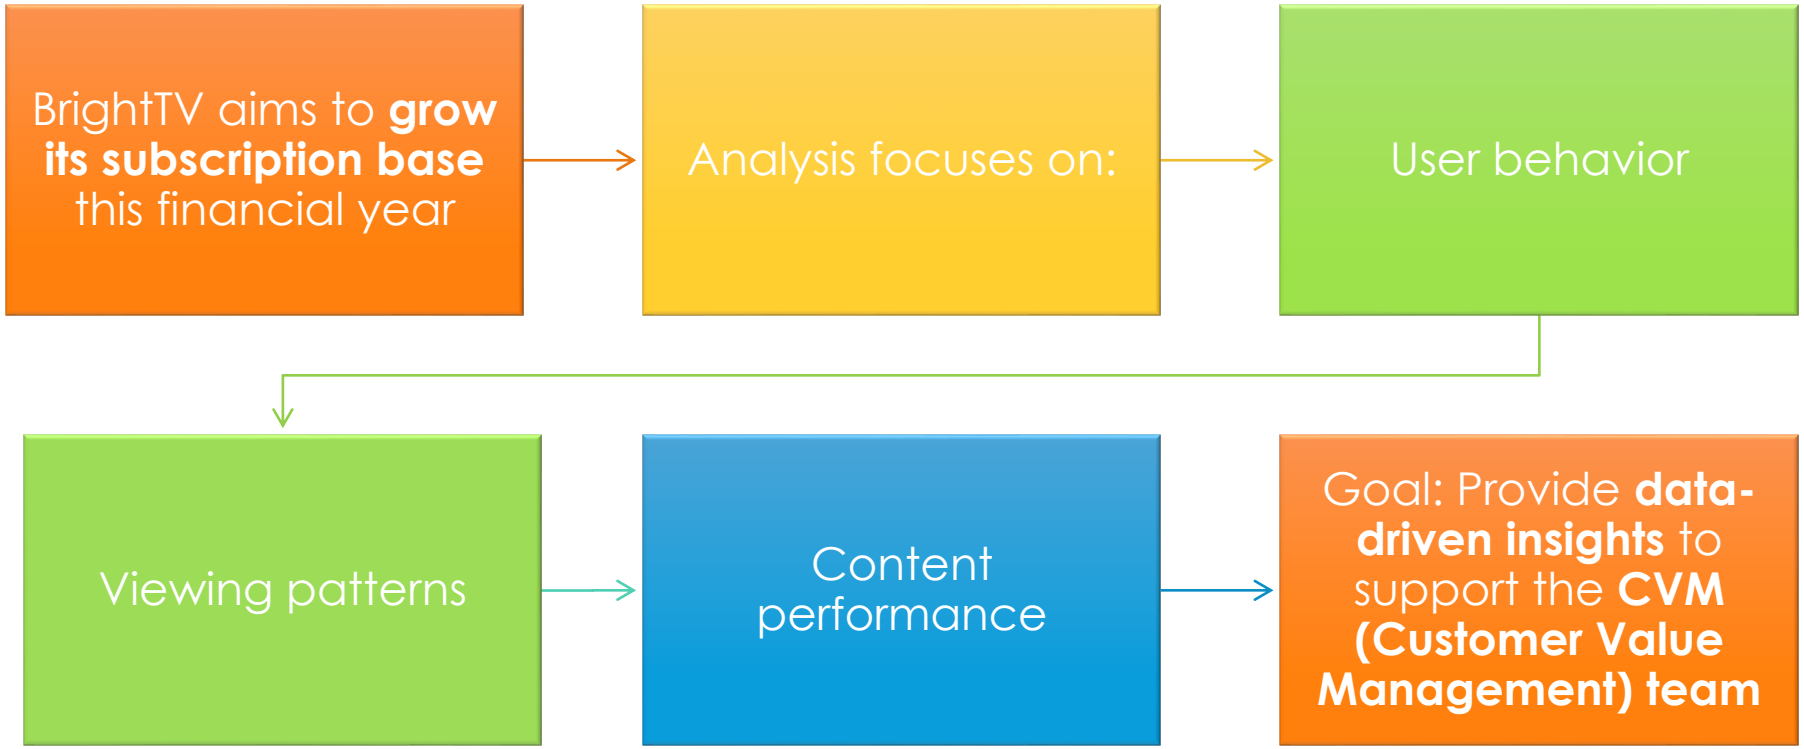
01.PROJECT OVERVIEW



02.OBJECTIVES

1

Analyze **user and viewership trends**

2

Identify **factors influencing consumption**

3

Recommend **content strategies for low-usage periods**

4

Propose **initiatives to grow the user base**

03.DATASET OVERVIEW

Total number of Users is 10989

The data is for the first 4 months of year 2016

The key fields

- User ID
- Gender
- Race
- Age
- Province
- Channel
- Date
- Time frame
- Age bucket
- Channel category

My dataset has 5 distinct Channel category

The viewership is throughout the 9 provinces in RSA

04.METHODOLOGY

Data Cleaning & Preparation

Data Integration using Databricks (JOIN user + viewership tables)

Feature Engineering:

Time frame
Age bucket
Channel categories
View count
year

Analysis using:

Excel Pivot Tables
Trend & behavioral analysis

Tools used in the whole project:

Miro
Databricks
Powerpoint
Google looker studio

05.DATA PROCESSING

Converted UTC → SA Time (+2 hours)

Created new fields:

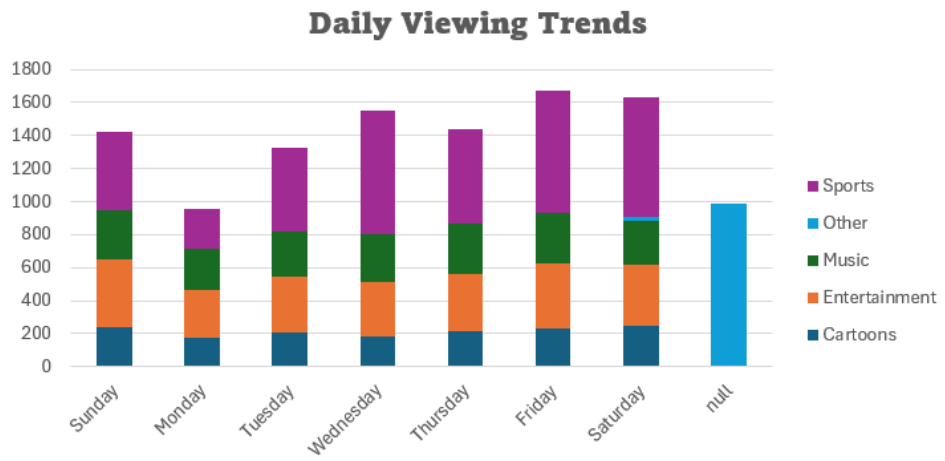
Date
Time
Year
Day of week
Channel category
Time frame
Age bucket
View count

Handled missing values using:

COALESCE logic

Aggregated data for reporting

06. DAILY CONSUMPTION ANALYSIS



- Total number of daily sessions per channel category
- Viewers love watching sports channel
- Cartoon channels are the least watched

Key Insight :

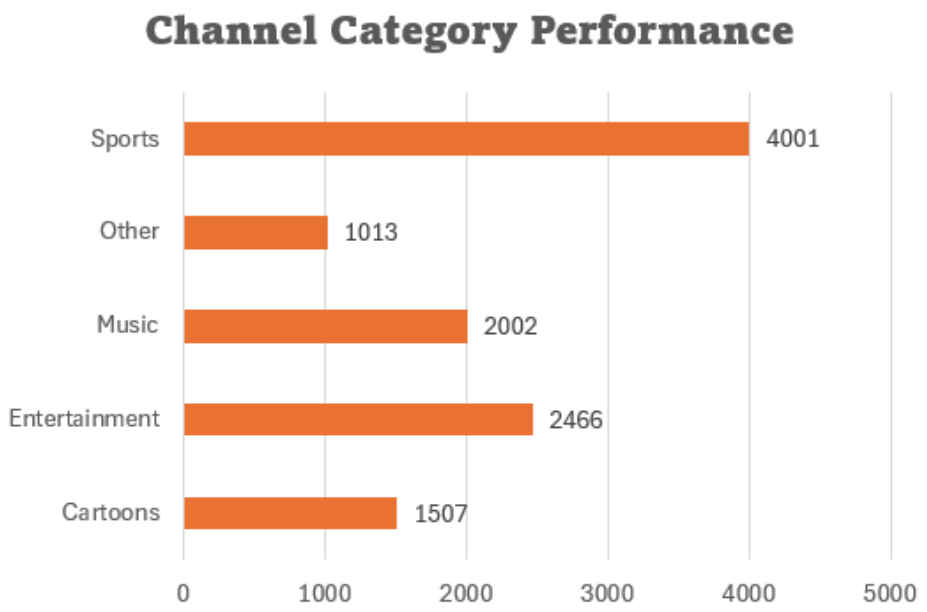
- Viewing is high weekends
- Midweek shows **lower engagement**

07. CONTENT PERFORMANCE PER CHANNEL CATEGORY

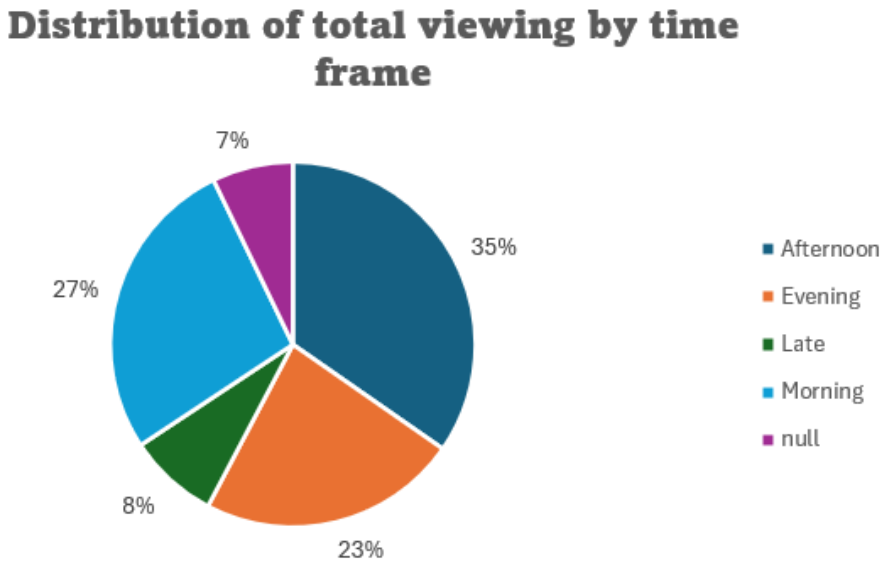
- Top 3 watched content categories:
  1. Sports
  2. Entertainment
  3. Music

Insights:

- Sports drives **highest engagement**
- Certain categories perform better at specific times



8. TIME-BASED ANALYSIS



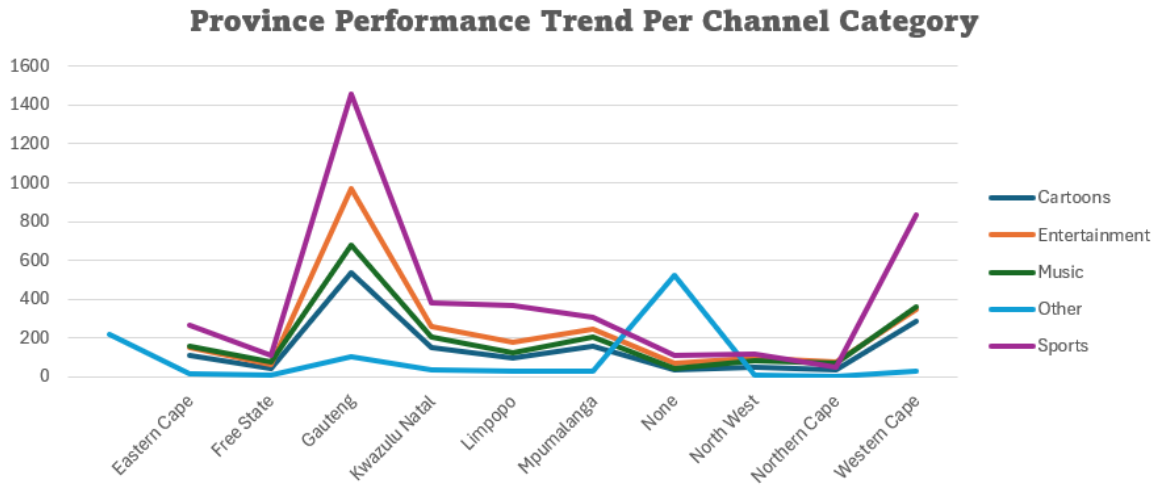
- **Afternoon (35%) is the peak period**, making it the most important time for engagement or activity.
- **Morning (27%) is also strong**, meaning most activity (62%) happens during the day.
- **Evening (23%) shows a decline but** still holds moderate value.
- **Late hours (8%) are the weakest**, with minimal activity.
- **Null data (7%) indicates missing information**, which should be cleaned for better accuracy

09. PROVINCIAL ANALYSIS

- **Top 5 performing Provinces**
  1. Gauteng **3751** viewers
  2. Western Cape **1866** viewers
  3. Kwazulu Natal **1034** viewers
  4. Mpumalanga **948** viewers
  5. Limpopo **789** viewers

- **Top 3 underperforming Provinces**
  1. Northern Cape **234** viewers
  2. Free State **301** viewers
  3. North West **353** viewers

218 viewers are unaccounted for



10. KEY INSIGHTS

Peak viewing occurs in the **afternoon**

Entertainment & Sports dominate consumption

Some days show **low engagement** during the week

A portion of users are **inactive or low engagement**

Geographic gaps exist in adoption

11. RECOMMENDATIONS

📺 **Content Strategy**

- Push **high-demand content** on low days
- Introduce **scheduled premieres/events**

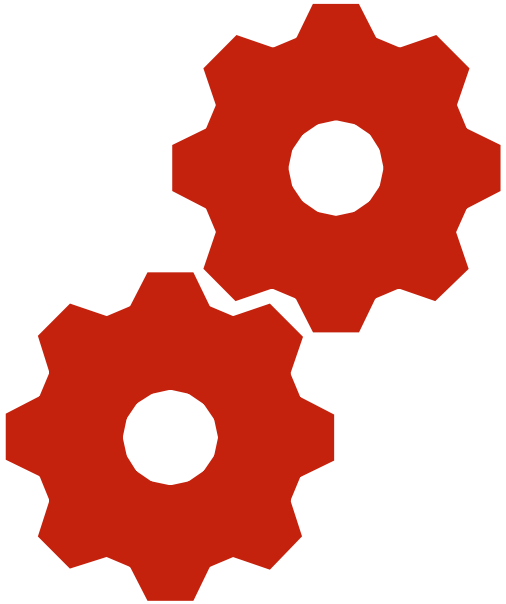
👥 **User Engagement**

- Target inactive users with:
  - Promotions
  - Notifications

📈 **Growth Strategy**

- Expand in low-performing provinces
- Offer **subscription bundles / discounts**

12. FUTURE IMPROVEMENTS



Add:

- Revenue/subscription data
- Customer churn metrics

Implement:

- Recommendation engine (AI-based)

Track:

- Watch time per session
- Customer lifetime value

13.CONCLUSION

Bright TV has strong engagement potential

Growth depends on:

- Content optimization
- User targeting
- Strategic promotions

Data-driven decisions will enable:

Increased consumption

Higher retention

Growth in subscriptions
